

Arad Sheybak

Senior Android & Full-Stack Developer (Android · Django · React) +989113892874 |
arad.sheybak@gmail.com | Iran-Gorgan | github.com/arad-sheybak | linkedin.com/in/arad-sheybak

Remote contract with potential relocation after a few months

Summary

Proactive and results-driven Android & Full-Stack Developer with over 5 years of experience building scalable mobile, backend, and web applications. Highly skilled in Kotlin, Jetpack Compose, and Django REST Framework, with hands-on experience in IoT integrations (MQTT, BLE) and frontend development using React. Strong background in modular architecture and API design, delivering production-ready apps for 10K+ users. Passionate about open-source development, IoT integrations, and creating scalable software that bridges mobile and backend systems.

Experience

Android Developer | NobParts | Aug 2025 | Iran | Remote (Contract-based)

Developed an Android **POS** application for Bank Mellat terminals to manage delivery packages and ensure secure order payments. Designed and implemented the app using Kotlin, MVVM, Coroutines, Retrofit, Hilt, and Navigation Graph, integrating **Barcode** scanning and OTP verification. Built a direct connection with the POS payment system to automatically transfer the exact order amount, eliminating manual entry errors. Improved operational accuracy and delivered the full project independently within 30 working days.

Full-Stack (Android & Backend) Developer | Gipa | 2024 – Present | Iran

Designed and developed an end-to-end restaurant ordering system based on Android POS devices and web components. Implemented Android app using Kotlin, Room, Navigation Graph, Coroutines, Hilt, dynamic IP management, and integrated payment and print automation. Built Django REST backend with PostgreSQL and Signals for real-time order tracking and thermal printer routing. Optimized order registration to under 10 seconds, reducing mistakes to zero.

Android IoT Developer | HSI (UAE) | 2022 – 2024 | Dubai, UAE (Remote, Contract-based)

Developed IoT Android app for real-time control of lighting systems (CCT, DDT, RGB, DALI), curtains, and thermostats through MQTT. Implemented reliable two-way communication with Eclipse Paho MQTT client and Kotlin coroutines. Delivered full real-time synchronization between server and IoT devices for smooth, stable operation across all controllers.

Full-Stack (Android & Backend) Developer | Noora (Australia) | 2024 | Remote (Contract-based)

Developed **BLE**-based IoT Android app for smart devices, implementing data transfer via Byte Arrays. Built Django REST backend with JWT and social logins (**Google, Facebook**). Delivered functional prototype connecting BLE devices to cloud and app under contract-based agreement.

Android Developer | Total | 2022 – 2023 | Iran (Full-time)

Developed bilingual (Persian-English) freight management app for logistics and transit companies. Built using Kotlin, Coroutines, GSON, MVVM, and Room DB. Automated manual freight request workflows, reducing human error and improving efficiency.

Senior Android Developer | BidArz | 2021 – 2022 | Iran (Full-time)

Led Android development of cryptocurrency exchange app from scratch. Implemented modules for authentication, wallet management, and live market tracking using Kotlin, Coroutines, Retrofit, Room, and WebSocket. Delivered scalable app with <1% crash rate, used by thousands of traders.

Technical Skills

Languages: Kotlin, Java, Python, JavaScript

Mobile: Jetpack Compose, XMLviews, Multi-Threading ,Kotlin Coroutines, MVVM, MVI, Retrofit,DI(Hilt ,Koin), Gson, Moshi, BLE, MQTT,R8, Repository pattern, Clean architecture,Navigation,Work Manager,,Keystore,encryption/decryption,Memory leaks, real-time communication(web socket, socket.io, Multi-language, Dynamic UI

Backend: Django, DRF, PostgreSQL, JWT, WebSocket, Django Channels, Celery,Django Signals

Frontend: React, HTML, CSS

Tools: Git,Gitlab, FCM,Firebase Crashlaytics, Jira, Trello, Docker (Basic), TailwindCSS

Open Source Contributions

AradFlight – Open-Source Flight Booking App github.com/arad-sheybak/AradFlight

Developed an open-source Android flight booking app using Jetpack Compose and Clean Architecture. Implemented Kotlin, Koin (DI), and Moshi (JSON parsing). Added ticket management module for purchased flights and offline access.

Education

Birjand University of Technology – Birjand, Iran Graduated: February 2019

Languages

Persian – Native

English – Professional working proficiency
